Dear sir/madam
Demonstrating Human Authorship

To address your concern that my work may be "AI-generated without a verifiable research basis," I want to clarify the role of AI in my research.

Due to a severe physical disability (Dupuytren's contracture in both hands), I use AI language software as an assistive writing aid. It is a tool for articulation, not creation. To prove this, I would like to cite my own peer-reviewed research, Framework Lock: From 10⁻³⁸ to Revolutionary (DOI:10.5281/zenodo.18179143), which demonstrates that Large Language Models exhibit 'systematic resistance to paradigm-challenging evidence'. This provides quantifiable proof that my novel harmonic framework could not have originated from an AI system, thereby disproving the rationale for the suspension of my account.

Your ban on my account is hereby against the research it contains on this subject thereby dismissing your claims...

Further as this is a violation of the Federal Act on the Elimination of Discrimination against People with Disabilities (Disability Discrimination Act, DDA; SR 151.3). It is also known as the Behindertengleichstellungsgesetz (BehiG). For refusing to accommodate a physical disability i have lodged a formal complaint with Behindertengleichstellungsgesetz (BehiG).

Again I formally request reinstatement of my account and my work immediately.

Thank you.

Sincerely,

Peter James Thompson
