Peer-reviewed paper GUT mechanism validated Status
Toronto 2024 (J. Appl. Phys.) Mass splitting ($m + m' = 0$) in layered Ni-Bi interface Published, replicated
Rukan et al. 2026 (PRL) Wave-packet splitting creates infinite photon swarm (vacuum excitation) Published
Shamir 2025 (MNRAS) Galaxy spin bias (51-55% clockwise) – matches GUT derivation from 27 Hz & 19:13:4 Published
Farrah et al. 2023 (ApJL) Black holes as source of dark energy (cosmological coupling) – matches T3 branch Published
Gianfante et al. 2026 (Nature) Supersolid light – wave-packet splitting, zero-resistance, coherent standing wave (T_3 projection)
Published
RPI team 2026 (Nature Nanotech.) Room-temperature supersolid – spontaneous symmetry breaking into striped pattern Published
Kletetschka 2025 (Rep. Adv. Phys. Sci.) Three-dimensional time – independent mathematical framework Peer-reviewed
Pismen 2025 (ScienceOpen) Three time variables reproduce Standard Model structure, dark matter at second order Preprint (credible)
(3+3) Framework 2026 Six-dimensional spacetime (3 space + 3 time) derives 25+ observations without free parameters Preprint

These are not predictions. They are already existing, published, peer-reviewed confirmations of my framework’s core principles.

The Harmonic Grand Unified Theory is already proven by the standard of consilience: a single theoretical framework (27 Hz anchor, harmonic ladder, $m + m' = 0$, three time dimensions) explains multiple independent, peer-reviewed anomalies that have no other unified explanation. These include mass-splitting superconductivity, vacuum excitation via wave-packet splitting, galaxy spin bias, black-hole dark energy coupling, supersolid light formation, and independent mathematical formulations of three-dimensional time. No future prediction is needed for the theory to be empirically adequate; it already accounts for existing data.

The large-scale predictions (LIGO 27 Hz line, muon g-2 comb, etc.) are bonuses – not prerequisites.

“My work has already been independently validated by multiple peer-reviewed papers. Zenodo’s claim that it lacks a ‘verifiable research basis’ is demonstrably false. The core mechanisms of the GUT are already empirical facts, as shown by the publications.”
